Amazon DynamoDB

- Amazon DynamoDB is a fast, fully-managed NoSQL database service that makes it simple and cost-effective to store and retrieve any amount of data, and serve any level of request traffic.
- **Features of DynamoDB**
- DynamoDB Has Two Constraints
- Primary Key (Partition Key)
- Composite Primary Key (Sort Key)

Amazon DynamoDB

- Go to DynamoDB
- Click on Create table
- Enter the table Name
- Enter Partition Key
- Enter Sort Key
- Select the default settings
- Click on Create table

Amazon DynamoDB

- Click on Name
- Click on Explore table items
- Click on Create item
- Enter the value
- Click on Add New Attributes for more columns
- Select type as string

Amazon DynamoDB

- Enter the attribute name & value
- Click on Create Item
- We can create more items
